Cavitaaf

Cavity Varnish

Cavitaaf AF do BRASIL is a cavity varnish used as a sealer of dentinal tubules and to improve protection against the invasion of aggressive agents. It is presented in liquid form, which solidifies on the walls of the cavities by evaporating the solvent, forming a semipermeable membrane.

INDICATION

Indicated as a sealer of dentinal tubules, preventing the infiltration of acids and deleterious agents, as an aid in the marginal sealing around restorations, preventing infiltration of fluids and debris at the restoration/dentin wall interface and to prevent the effect of galvanism on the pulp.

PRESENTATION

Box with 1 (one) bottle containing 15ml of Cavitaaf AF do BRASIL.

n° 80432419010
