Ciment-Fill Kit

Root Canal Obturator Material

Ciment-Fill AF do BRASIL is an intracanal filling material that has bacterial action. It is formed by a powder and a liquid that, after mixing, form a homogeneous and easy-to-handle paste, taken to the canal in a plastic state for use with gutta-percha cones, whose function is accessory to the condensation of the paste.

INDICATION

Indicated as a cement for root canal filling, presenting a good tolerance by the apical tissues, radiopacity and impermeability. It has a fine granulation, providing a homogeneous mixture and a perfect flow.

PRESENTATION

Box with 1 (one) bottle containing 12g of Ciment-Fill Powder AF do BRASIL and 1 (one) bottle containing 10ml of Ciment-Fill Liquid AF do BRASIL.

n° 80432410037
